Explain the Program

Set an End Date

Web Development Student

Dev Bootcamp

June 2014 – October 2014 (5 months) | Chicago

Dev Bootcamp is a 19-week intensive training program for aspiring web developers, specializing in Ruby, Rails, HTML5, CSS, Test Driven Development, Object-Oriented Javascript (AJAX, JQuery), Git and Source Control, Heroku, and Agile Development. I graduated from the program in October 2014.

The first 9 weeks of the curriculum are remote, while the second 9 weeks are an immersive in-class experience. The program also addresses intra- and interpersonal strategies to fostering optimal learning and teamwork environments.

Context →

September 2014

Context is a real-time chat platform for interacting with other users currently browsing the same web page. It unifies web commenting on a single platform and on a live basis. The Context platform is site agnostic - it will work on any page on the Internet.

Context was built with Ruby Event Machine, React.js, Active Record, Websockets, and the Chrome API.

Description

I recently graduated from Dev Bootcamp and am now looking for my first job as a junior developer, whether that be via an apprenticeship, internship or full-time position.

A former social worker, I am passionate about for purpose work and hope to find work with a company who has a strong mission and purpose.

Education

Dev Bootcamp

Web Development

2014 – 2014

Dev Bootcamp is a 19-week intensive training program for web developers, rooted in learning full stack development skills and empathetic team cooperation. I graduated from the program in October 2014.

This program focused on full stack development skills - specifically Ruby, Javascript, SQL, HTML and CSS while thinking about the larger web picture of application and database design.

We also learned various frameworks for these languages including Rails, Sinatra, jQuery, Underscore.js, React.js, and Node.js.

The program culminates with two team projects - one condensed 5-day project and one longer 8-day capstone. We focused on agile development, version control, iterative software practices, and empathetic communication.

Activities and Societies: [Mantis Cohort 2014](#)

Summary

I'm a web developer that appreciates things that are simple, yet powerful. I get giddy when I make websites, and am even happier when they make a real difference. I'm no stranger to learning new languages and value growth over recognition and comfort.

A few months ago, I prescribed to Dev Bootcamp's 19-week curriculum for aspiring web developers; and now, Ruby and Javascript are my lifeblood. I took a deep dive into learning full stack web development and becoming a more connected and empathetic team member.

As a former project manager, I have a background in leading client projects and supporting teams of writers, designers and developers. While on the job, I started exploring the depths of Wordpress and Drupal, and taught myself html so that I could do the quick fixes and speed up our process. I started seeing web development as this giant puzzle, waiting for me to come solve it.

Born and raised in the heart of Chicago's North side, I take pride in where I'm from. Supporting my community has always been my mantra and all things that make our city a better and happier place are what motivate me.

I'd love to learn more from others in my community. Feel free to connect with me at theodoraskolnik@gmail.com.

Summary

With a background in Computer Graphics, HTML, and CSS, and my recent experience as JavaScript Developer, I'm continuously aiming towards a synergy between sound code and beautiful web in the world of Front-End development.

As a passionate problem-solver, my love of puzzles, programming, and design is fulfilled through learning Ruby on Rails, JavaScript, and other web technologies. I provide a high attention to detail, and a fast-paced workflow, while also keeping the surrounding environment light and dynamic.

I have a high amount of energy and a strong desire to continue advancing my skills. I'm seeking a passionate learning environment where I can not only deepen my existing skills, but develop new ones while immediately adding value to future projects.

My interests and specialties include: Ruby on Rails, JavaScript, RubyMotion, and CSS.

Reach out if you want to talk more about all things code and design!
